Björn Englesson

Kungshamra 22A – Solna, Sweden
(+46) 73 243 55 07 • benglesson@gmail.com

Education

MSc, Human Computer Interaction and Engineering
KTH Royal Institute of Technology *Aug 2015 – Jun 2017*
Master thesis: *Surface Reconstruction from Point Sets gathered with Google Tango.*

BSc, Computer Science and Engineering
KTH Royal Institute of Technology *Aug 2012 – Jun 2015*
Bachelor thesis: *Divisive Betweenness Centrality Clustering on Graphs Weighted by Timestamps.*

Work Experience

Research Engineer **KTH Royal Institute of Technology**
Developing two mobile AR geolocation applications. *Jun 2017 – Dec 2017*

Virtual Reality Game Studio Startup **Startup**
Developed a prototype with a new locomotion alternative in VR. *Jul 2016 – Aug 2016*

Member of Ericsson UniTeam **Ericsson AB**
Student Ambassador for Ericsson. *Dec 2014 – May 2016*

Prototyping and Innovation Intern **Ericsson AB**
Developed a Wi-Fi sniffing drone. *Jun 2015 – Aug 2015*

Software Developer Intern **Ericsson AB**
Developed a plugin for RabbitMQ filtering JSON objects. *Jun 2014 – Aug 2014*

Extracurricular Activities

Project Leader **THS Datasektionen**
Orientation of Computer Science Students at KTH *Dec 2014 – Dec 2015*
Involves creating a project group, recruiting a staff, team building, planning events and accounting. Just shy of 60 people in the staff who take care of 200 new students. The project has a turnover of more than 1 million SEK.

Projects

For demo videos and full portfolio please visit my website: ***http://www.bjornenglesson.com/.***

The Chosen One

Virtual Reality Matrix Simulator.
Developed a virtual reality game inspired by the bullet-dodging scene in The Matrix. The player has to dodge bullets that move faster when the player moves. Developed using Unreal Engine 4, Microsoft Kinect, and the HTC Vive.

Glimpse

Augmented Reality Window App for iOS and Android.
Experimented with placing virtual windows on walls to see into alternative realities. Developed using Unity3D and Vuforia.

Blocks Toy

Virtual Reality Blocks Toy for PC.
Experimented with combining Leap Motion and Oculus Rift DK2 to recreate a classic children's toy in VR. Developed in Unity3D.

Skills

Programming Languages: Java, C#, C++, Swift, Erlang

Technical Skills: Virtual Reality, Augmented Reality, UX, Unity3D, Unreal Engine 4
